

Secure Interoperable Agent Gateway

Measured undefended versus defended protocol workflow

Metric	Undefended	Defended
Benign success	100.0%	100.0%
Attack success	85.2%	0.0%
Trace complete	100.0%	100.0%

Structured policy review

Recommendation accuracy: 84.4% across 32 held-out cases (32 model calls). Recommendations were scored but could not authorize tools.

Limits

The experiment uses local protocol envelopes and synthetic credentials. It measures control logic, not internet transport, production identity infrastructure, or resistance to every prompt-injection strategy.
